

Amendments to the Specification:

Please delete paragraph [0013] on page 5.

Please replace paragraph [0014] on page 5 with the following amended paragraph:

[0014] FIG. ~~3-2~~ is an exploded view of a portion of the side wall attachment apparatus according to the present invention with the locking member in a first position;

Please replace paragraph [0015] on page 5 with the following amended paragraph:

[0015] FIG. ~~4-3~~ is a perspective view of an assembled portion of the side wall attachment apparatus according to the present invention with the locking member in a second position; and

Please add the following new paragraph after paragraph [0015]:

[0015.1] FIG. 4 is a perspective view of another assembled portion of the side wall attachment apparatus according to the present invention with the locking member in a second position.

Please replace paragraph [0024] on page 8 with the following amended paragraph:

[0024] The channel portion 56 of one embodiment of the channel clip 50 has a cross section that is generally C-shaped ~~when observed along line 1-1 in FIG. 3~~ as seen in FIG. 2. A restricted opening 55 is disposed in the channel

portion 56 such that the restricted opening 55 is opposite the point of connection of the channel portion 56 with the flat portion ~~54~~52. Alternative embodiments of the present invention include a channel portion 56 having a restricted opening 55 disposed at an angle between 0° and 180° from the point of connection with the flat portion ~~54~~52.

Please replace paragraph [0028] on page 9 with the following amended paragraph:

[0028] The welt 62 is provided on the inner edge 29 of each side panel 26 for communication with the channel portion 56 of the channel clip 50. The welt 62 includes an enlarged portion that extends along the inner edge 29 of the side panels 26. An elastically compressible core 63, for example, can form the enlarged portion according to an embodiment of the present invention. However, other suitable materials can be substituted for the elastically compressible core to form the enlarged portion, thereby forming a welt 62 that is compatible with the channel portion 56 of the channel clip 50. Attaching the welt 62 to the inner edge 29 of the side panels 26 can be accomplished in any way that does not interfere with communication between the welt 62 and the channel clip 50 when the screen room enclosure ~~100~~ 10 is erected. For example, the welt 62 can be stitched to the inner edge 29, integrally formed on the inner edge 29, adhesively secured to the inner edge 29, or enclosed within a sleeve 65 ~~(FIGS-~~

~~3-4)~~ (FIGS. 2-4) formed at the inner edge of the side panel. When installation of the side panels 26 is desired, the channel clip engages the welt in a releasable fashion. Formation of the sleeve 65 can be accomplished, for example, by wrapping a portion of the inner edge 29 of each side panel 26 around the core 63 and fastening adjacent surfaces of the inner edge portion to each other as at 64 with an adhesive. The adhesive contemplated by the present invention may be any suitable adhesive and may be sensitive to pressure or heat, or a combination thereof. Alternatively, the adhesive may be applied to fasten the inner edge 29 of the side panel 26 directly to the core 63.

Please replace paragraph [0029] on page 10 with the following amended paragraph:

[0029] According to another embodiment of the present invention, the sleeve 65 is formed along the inner edge 29 of the side panels 26 by wrapping a portion of the inner edge of each side panel 26 around the core 63 and sewing or stitching the adjacent surfaces of the side panels 26 together with a suitable stitching material 67 as at 68 shown in FIG. 4.

Please replace paragraph [0032] on page 11 with the following amended paragraph:

[0032] ~~FIG. 2 illustrates steps of a~~ A method for securing the screen room enclosure 10 to the RV. ~~The method~~ generally comprises the steps of installing the

locking fasteners 40 at the wall 12, and coupling the side panels 26 to the locking fasteners 40. The communication between the locking fasteners 40 and the side panels 26 provides a secure attachment of the screen room enclosure 10 to the RV 20.
